# Wecoline pads by Americo

## Wecoline floor pads certifications

The full-cycle basic material is made exclusively from recycled PET plastic with water-based resins. Once used, the basic material — and therefore the floor pad — biodegrades more rapidly (see illustration below). The cardboard is also FSC certified.

### Green Seal

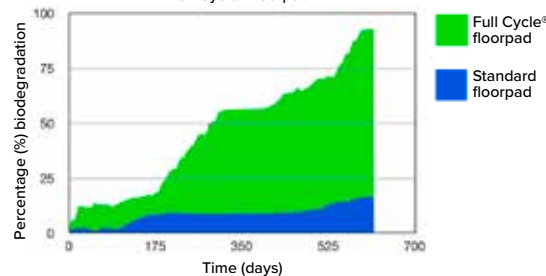

Wecoline Full Cycle® pads by Americo are certified by Green Seal™ for ecological innovation. The certification is based on accelerated biodegradability at waste disposal sites and a 100%-recycled material / natural fibre (GreenSeal.org/GS20).

This means that the pads offer each user a guarantee that it is the best and most environmentally friendly solution, in addition to providing the highest quality and sustainable performance.

### Biodegradation

Full Cycle® floorpad

Tests\* reveal 92.5% composting of Wecoline's Full Cycle® pads by Americo in 616 days and only 16.4% in the case of a standard floor pad.

\*ASTM D5511 tests simulate composting under anaerobic conditions. Actual composting will vary, depending on the conditions at the individual or waste disposal sites.

Each year, we use more than two million PET bottles for the production of the pads.

1

Accelerated biodegradability

2

Excellent cleaning

3

Solution for any type of floor and dirt

4

Sustainable

### Strip pads:

All dirt and polymer films are removed from the floor. The floor is first returned to a baseline situation.

### Scrub pads:

These are used for intensive floor cleaning. Encrusted dirt is removed.

### Spray pads:

These are used for daily cleaning duties and to polish polymer films. Dirt and scratches are removed and a high-gloss polish created.

### UHS pad:

Suitable for buffing and polishing into a super high gloss.

“The quality is high and very constant.  
The price/quality ratio of the entire  
product range is also very good.”

John, cleaning wholesaler

Available in all desired round and rectangular dimensions.

**TIP**  
THE DARKER THE  
PAD, THE MORE  
CHALLENGING  
THE TASK

\*item number depicted is 17", two final digits change if you want a different size.

# Floor cleaning with water only: Bright 'n Water pads

Brilliant floor pads with a diamond top layer suitable for stripping, cleaning and polishing with just water. Remarkable results achieved without chemicals!

- ✓ **The results are phenomenal**
- ✓ **Widely applicable**
- ✓ **Environmentally friendly**
- ✓ **Can be used during the day, without causing much nuisance**

Ron, independent facilities services consulting specialist (not depicted in photo)

- ✓ Excellent results
- ✓ Environmentally friendly
- ✓ Safe to apply and use
- ✓ Cost-saving
- ✓ Suitable for almost all floors

## Assortment

Bright 'n Water Strip Pad #0

Bright 'n Water Upgrade Pad #1

Bright 'n Water Upgrade Pad #2

Bright 'n Water Cleaning Pad

Bright 'n Water Cleaning Pad Extra

Bright 'n Water Cleaning pad Intense

Bright 'n Water Polish pad

## Method

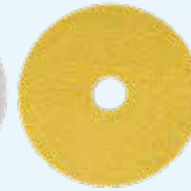

MARBLE  
NATURAL STONE /  
MARBLE  
COMPOSITE  
TILES

Use the Upgrade pad #1 for (in-depth) cleaning to achieve a clean and exposed floor. Then use the Upgrade pad #2 to seal the floor with light cleaning. Use the cleaning pad to achieve a fully sealed and polished floor. The cleaning pad is also the pad to be used for maintaining a marble floor.

Upgrade pad #1

Upgrade pad #2

Cleaning pad

LINOLEUM

For stripping, use the strip pad #0. A protective layer can be applied immediately after stripping. Use the cleaning pad daily or weekly as needed underneath a scrubber dryer or a single-disc rotary floor buffer to clean the floor, to keep the floor sealed or to maintain and retain the polish of floors with a protective layer. The cleaning pad can also be used dry underneath a high-speed or ultra-high-speed machine. The result is a shiny, yet slip-resistant floor.

Strip pad #0

Cleaning pad

RUBBER AND  
PVC FLOORS

Use the cleaning pad for daily maintenance. If there is a backlog in floor maintenance, scrubbing the floor with the Upgrade pad #2 is sufficient. The cleaning pad can also be used dry underneath a high-speed or ultra-high-speed machine. The result is a shiny, yet slip-resistant floor.

Upgrade pad #2

Cleaning pad

CERAMIC  
TILES

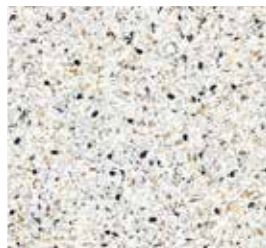

If you have a floor maintenance backlog, use the Upgrade pad #1 for scrubbing. Scrub the floor daily or weekly as needed with the cleaning pad to maintain it.

Upgrade pad #1

Cleaning pad

TERRAZZO

Use the Upgrade pad #1 for deep cleaning. Then use the Upgrade pad #2 to seal the floor with light cleaning. Use the cleaning pad Extra to achieve a fully sealed and polished floor. Due to the unique diamond mixture, the cleaning pad Extra is very suitable for performing maintenance of large, intensively used surfaces in retail.

Upgrade pad #1

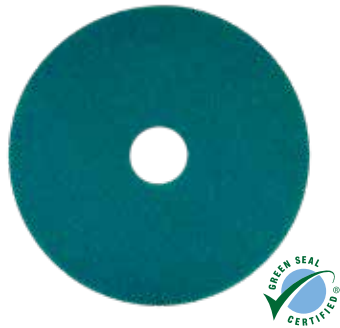

Upgrade pad #2

Cleaning pad Extra

# Special pads

## Smart scrub pad

The smart scrub pad turquoise Full Cycle®, suitable for daily cleaning on hard floors with only water. This pad cleans and polishes the floor. Pads can be used on both sides.

## Maroon pad

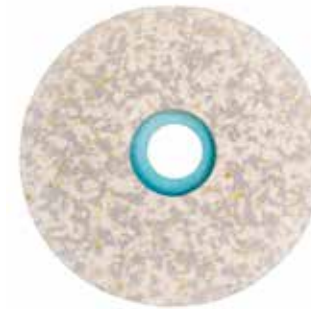

The Maroon Chemical Free Stripping Pad is specially designed for dry or water-only removal of floor finishes with a single-disc machine or a scrubber dryer. It is no longer necessary to use aggressive chemicals. This offers many benefits: no more waiting, less incorrect usage, safe for the employee and better for the environment. This is how easy, environment-friendly and cost-effective floor stripping can be.

## Melamine pad

The melamine pad consists of pure melamine. This is the material of the stain sponge. This pad is mainly used as a problem solver on surfaces such as rubber floors, swimming pool floors or PVC floors (with structure). It is also very suitable for cast floors.

The pad must be used with plenty of water. Otherwise it will wear out prematurely. No chemicals. Be careful with varnish and soft coatings — these can be damaged by the pad.

## Combo Melamine pad

The combo melamine pad consists of compressed melamine. This causes the pad to wear slower and extends its lifespan. Both melamine pads are suitable for corded machines as well as cordless ones, provided ample water is used. When using melamine pads, it is recommended to perform a test in an inconspicuous spot first.

## Brush pad

This pad is made of polyamide-based artificial grass. Due to its texture, it can easily reach in the seams of tile floors and textured floors. The keyword here is seam cleaner. This pad is also suitable for outdoor use (terraces). To be used at low revs. It is recommended to use only with water.
