BubbleFlush

Toilet cleaning
without chemicals

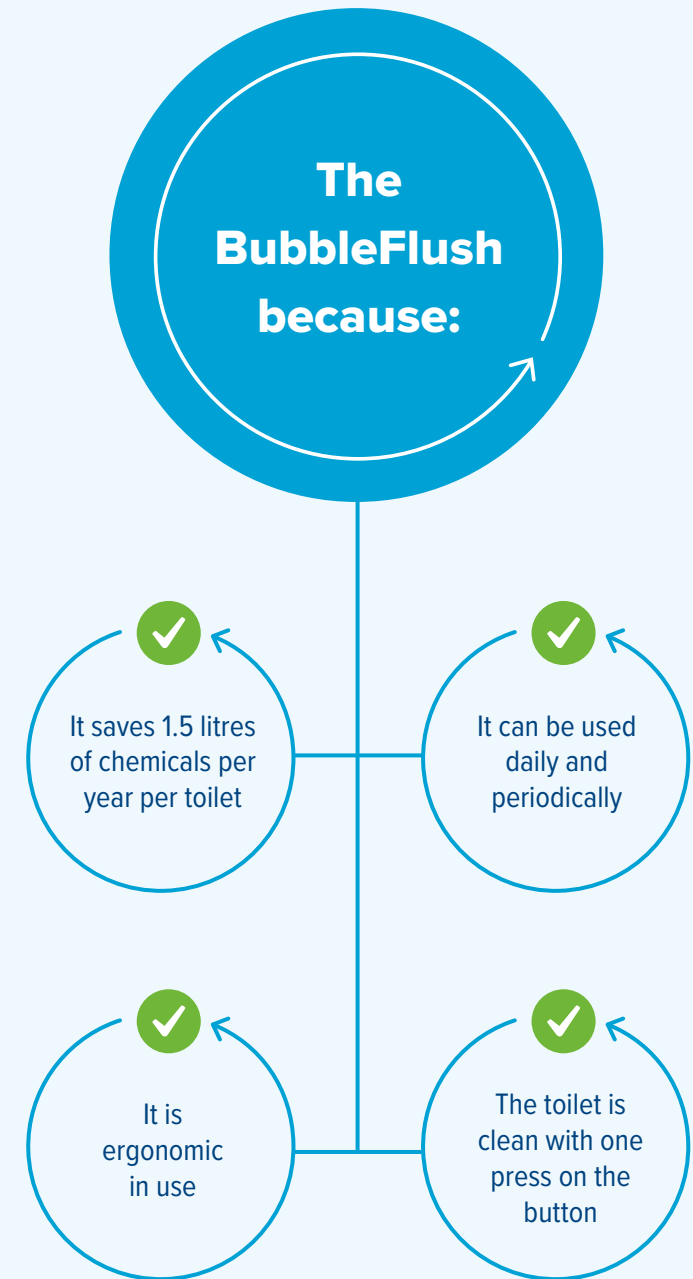

The BubbleFlush is the world's first active toilet cleaning system that cleans toilets without using environmentally harmful cleaning agents.

The patented product uses ultrasonic vibrations.

These vibrations create small powerful air bubbles

in the water that eventually implode with force

to remove lime and attached dirt in a flash.

The BubbleFlush consists of:

- Handle with battery
(part 1)
- Cleaning head
(part 2)

1

2

Procedure:

Green, flashing:
BubbleFlush is ready for use

One short press:
Blue flashing BubbleFlush
works for 30 seconds

Press once with blue light:
BubbleFlush is switched off

Red, flashing:
BubbleFlush needs charging

BubbleFlush Waterstop

To clean the upper part of the toilet bowl, it requires the water level to rise.

The waterstop closes the siphon, allowing water to flow into the toilet bowl at the press of the flush button.

Use the BubbleFlush to perform cleaning under water. After cleaning, the handle of the waterstop can be pulled up slightly, allowing the water to drain through the waterstop.

For daily & periodic cleaning

Procedure:

Daily Cleaning:

- Clean with brush
- Flush
- Operate BubbleFlush (30 sec)
- Flush

Weekly cleaning:

- Clean with brush
- Flush
- Operate BubbleFlush (30 sec)
- Place Waterstop
- Flush to bring up waterlevel
- Operate BubbleFlush (1 or 2 x 30 sec)

Save 1.5 litres of chemicals per toilet? Then clean with the BubbleFlush.

The BubbleFlush is kept in the toilet bowl where no physical force is required from the cleaning employee. During cleaning, you are no longer exposed to cleaning agents.

Using the BubbleFlush reduces the use of plastic, waste, transport and water. Other results are cleaner wastewater and improved waste management.

Eliminates 1.5 litres of chemicals per year per toilet bowl

100% recyclable after service life
