Wecoline Clean 'n Easy

Ready-to-use concept
for cleaning

wecoline®

“We use the Clean ’n Easy blue cleaning cloth. It is ready to use and you just use it once. Very easy and safe. We use it to clean medical and nursing equipment, among other things.”

Janine, infection prevention expert

Why Clean 'n Easy?

Clean 'n Easy offers
a ready-to-use
solution for cleaning
in healthcare

With Clean 'n Easy, you always use **clean products**. Because these products are used only once, there is no chance of cross-contamination. This is very important in healthcare.

You can work **faster** with Clean 'n Easy. The products are ready to use and do not need to be washed. That saves a lot of time.

Clean 'n Easy can be used throughout the entire healthcare sector: from residential care centres and hospitals to nursing homes.

Effective
cleaning

available

Several
accessories
available

Handy large
cloths:
36 x 30 cm

Ready-to-use impregnated cloths

Ready-to-use cloth

The rolled-up cloths are packaged in a durable dispenser bucket. The colour of the bucket indicates the application. Blue: interior, red: sanitary facilities and yellow: kitchen.

Floor mops

This product is ready to use. Single use is the best solution for fast and effective cleaning in areas where hygiene is important.

Dispenser bucket with ready-to-use cloth on a roll for the interior

Refill packaging for the interior

Non-woven floor mop in bucket

Non-woven floor mop, refill

Dry microfibre products

Practical and thorough: Clean 'n Easy in a dispenser

Clean 'n Easy is also available in a roll, for use in a dispenser. The combination of microfibre and dispenser is indispensable in healthcare, where absolute hygiene is a requirement. The fibre core maintains a good hold on dirt, resulting in a clean and streak-free surface. There is no risk of incorrect usage, cross-contamination or an incorrect washing protocol.

An overview of the facts:

- The guarantee of always having a clean cloth.
- The quality of microfibre with the hygiene of a disposable.
- Can be discarded with residual waste after use.
- There are two variants of the single use microfibre cloths: those with 100% microfibre, or those with 50% viscose and 50% microfibre.

Widely applicable throughout healthcare

Interior sleeve sticky dustcloth

This sleeve is made of sticky dustcloth material, which makes it easy for dust and dirt to stick to the sleeve.

Spray mop with dry flat mop

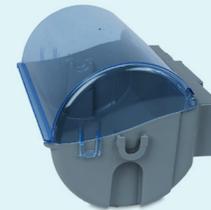

This spray mopping system lends itself perfectly to disinfection applications.

Compatible with the following products:

Wall dispenser microfibre cloth on a roll

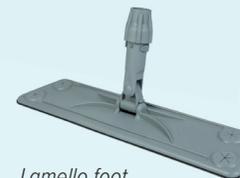

Cloth dispenser for microfibre cloth on a roll

Telescopic handle aluminium

Micro sole

Lamello foot

“We have been using the blue and yellow Clean 'n Easy buckets for years now. It is our go-to cleaning agent in places such as the nursing ward. We use Clean 'n Easy because it does the job. The cloth remains moist even after use. We continuously monitor whether this cleaning method remains adequate, and that has been the case for years.”

Emergencies

Need superfast absorption?
Use these Clean 'n Easy products

Absorb mat

Prevent a stain from expanding or being spread out? This mat absorbs up to 1200 ml of liquid in 30 to 120 seconds, depending on its viscosity. Once absorbed, the liquid transforms into a gel. As a result the mat is dry to the touch and does not leak.

Absorb mat

Compact trolley

In an emergency, it is certainly practical to have all products and equipment at hand. The trolleys are available in various dimensions. They can be combined modularly, depending on the object, making them an ideal trolley for every cleaner. The trolleys are very presentable because they are completely closed. Used materials and waste remain out of sight.

Compact trolley

“We use the blue cloths (Clean 'n Easy).

These are great as you can clean just about anything with them. We mainly use them for:

- **digital devices** (*iPad and phones, among other devices*)
- **keyboards, mouses, and displays**
- **(walking) aids in healthcare** (*handles of walkers/wheelchairs, hoists, etc.*)
- **workplace environment** (*desk/armrest office chair, among others*)
- **exercise equipment physio** (*ramp railing, etc.*)

The cloths are intended for (intermediate) cleaning of the (healthcare) environment, treatment areas, and various materials. Clean 'n Easy is ideal for fast and hygienic cleaning. The disposables have therefore been placed throughout the healthcare facility. The practicable and lockable buckets can be found at strategic locations.”
